

EPICOR®

EpiCor is safe for everyday use and some individuals taking EpiCor have reported improved immune performance.

Joint health, respiratory health, digestive issues as well as colds and flu have all been linked to improper immune function.*

**Be healthy.
Balance your
immune system.**

What is EpiCor®?

EpiCor is a safe, natural dried fermentate comprised of dozens of nutrients and compounds that work together to support a strong, healthy immune system in many beneficial ways. In other words, it acts like a multivitamin for your immune system®.*

When taken daily, EpiCor is a safe and effective way to support your immune strength so you can live more healthy days with the people you love.*

How does EpiCor differ from other immune products?

Unlike EpiCor, many other ingredients are single compounds that do specific, limited things. EpiCor is different because it's a natural ingredient comprised of many nutrients and compounds. Specifically, EpiCor is a unique combination of protein, fiber, polyphenols, vitamins, amino acids, antioxidants, beta glucans and other metabolites that work together through multiple modes of action to help support a healthy immune system.*

Is EpiCor safe?

EpiCor has been thoroughly tested for safety, including multiple human research studies and a dedicated published safety study. EpiCor is safe for both adults and children.

What is the recommended dosage of EpiCor for adults and children?

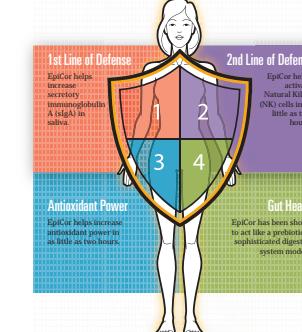

The current science supporting EpiCor suggests a daily dose of 500 mg. For children, the recommended daily dose is 125 mg per 40 lbs of body weight.

EPICOR® A STRONG, HEALTHY IMMUNE SYSTEM

PUT ON YOUR IMMUNE ARMOR

It's really simple...the stronger and healthier your immune system, the better you feel.

How to get there? Dietary supplements formulated with EpiCor provide the right immune armor.

of defense, hence it's best taken year-round for maximum benefit.*

How does EpiCor work?

Unlike other immune ingredients that only temporarily boost the immune system, EpiCor supports a strong, healthy immune system in many ways: It helps reinforce your first and second lines of defense, increases antioxidant protection and also may help support good gut health.* What other immune ingredient can do all that?

History of EpiCor

SERENDIPITY, that's the story behind EpiCor! For over 50 years Embria Health Science's parent company Diamond V, manufactured fermentation products to help animals stay healthy and be more productive. It was not until the late 1990's that the company realized their fermentation ingredients were having beneficial effects on the factory workers who worked directly with it. Factory workers exposed to the product rarely used sick leave and the company's health care expenses were significantly below reported state averages. Scientific testing suggested that the factory workers had stronger immune systems compared to the office workers and further research helped to formulate a human-grade version of the product.

EpiCor's scientific studies are well designed and follow strict protocols. Studies on EpiCor include:

- Seven published human clinical trials
 - Five randomized, double-blinded, placebo-controlled trials (the Gold Standard of research)
- Two published animal studies
- Two published series of in vitro studies
- Published article summarizing multiple safety studies

Why is a strong immune system important?

Everyday, your immune system is constantly being stressed by internal and external challenges as well as by environmental toxins. Stress, lack of sleep and poor nutrition can also affect your strong, healthy immune health. All these stressors may lead to a compromised immune system, which impacts your quality of life.

That's why it's so critical to keep your immune system strong on multiple levels to be ready to respond appropriately to everyday challenges.
